CLOSURES AT LOW EAVES

U.S.A. currently supplies outside closures for PBR and PBA wall panels at the rakes and high eaves as a standard. For unknown reasons the low eave has been excluded from this requirement (unless specified otherwise on the order).

Effective immediately U.S.A. will begin supplying outside closures at the low eave for all PBR and PBA wall systems. Our previous standard showed this as an option and we would supply these only if specified by the customer or if the customer drawings showed this requirement. These details will be revised to show the closures as standard on all conditions of this sort.

Updated details on this application are shown below:
